Tata Smartflo — Voice Bot / Voice Streaming

Questions for enabling the AI voice agent · Multi Solar (Multi Infrastructure & Engineering Pvt. Ltd.)

40 questions

DID	Smartflo account / company ID	Tata contact & date	Our contact
080-6537-8787			

#	Question to Tata	Why we ask	Answer / notes
A. Activation (Channels Hub / Voice Bot)			
1	Please enable **Channels Hub → Voice Bot (bi-directional voice streaming)** on our account. By when will it be live?	Without it the AI cannot talk on calls. Today it is not visible in our panel.	
2	Is there any extra charge or plan upgrade for Voice Bot / voice streaming? Monthly or per-minute?	Budget approval.	
3	Who in your team is our technical contact for the integration (name, email, phone)?	For problems during testing.	
4	Can you share the latest documentation for Voice Bot, Bi-directional streaming, Click to Call Support API and Webhooks?	We built to the public docs; we want the latest version.	
B. Voice Bot endpoint (our server)			
5	We will give a **wss://** URL (TLS, port 443). Any requirements on certificate, port, domain or path?	So the connection works first time.	
6	Static or Dynamic endpoint — which do you recommend? For dynamic: timeout (we read 2 seconds) and exact JSON response?	We support both.	
7	Do you send any authentication (header / token) to our WebSocket? Can we add a secret in the URL or a custom header?	Only Tata should be able to open our stream.	
8	Do we need to whitelist Tata's IP addresses on our server? Please share the IP ranges.	Firewall settings.	
9	Audio format confirmation: 8 kHz μ-law mono, base64, media every 100 ms, chunks in multiples of 160 bytes?	Matches what our server sends and receives.	
10	Are custom parameters (customer name, our call id) passed in the **start** event? How do we set them?	So the agent greets the customer by name.	
11	If our server is down or slow, what happens to the call? Can we set a **fallback** (IVR / agent queue)?	No customer should hear silence.	
C. Inbound calls and our IVR (1 Sales · 2 Sales Head · 3 CRM)			
12	Can we add an IVR option (for example **"Press 4 for AI assistant"**) that routes to the Voice Bot, keeping 1/2/3 as they are?	We do not want to lose the human IVR.	
13	Can the Voice Bot be used only **after office hours** / holidays using Time Conditions?	AI answers when the team is not available.	
14	Can API Dialplan route a call to the Voice Bot as a destination?	Docs list agent, department, number, auto_attendant only.	
15	Is the caller's number (**from**) always passed to the bot, including withheld numbers?	To find the lead and greet by name.	

#	Question to Tata	Why we ask	Answer / notes
D. Outbound calls (AI calls our leads)			
16	In **Click to Call Support API**, can the API key's Destination be the Voice Bot? Customer leg first, then the bot?	This is how our dialer will place calls.	
17	Can **caller_id** be our DID 080-6537-8787 for these calls?	Customers must see the company number.	
18	Is **custom_identifier** returned in webhooks and in the stream start event?	To match each call to our records.	
19	Ring timeout limits and what status/webhook we get for no-answer, busy, switched off, invalid number?	Our dialer retries based on this.	
20	Is the Voice Bot supported with Broadcast / Outreach campaigns now, or only Click to Call?	Docs say campaigns are not supported yet.	
E. Transfer, DTMF and hang-up			
21	How can the bot **transfer a live call** to a human agent / department (Sales, Sales Head, CRM) — API, event or dialplan?	When a customer asks for a person or wants to negotiate.	
22	Is **warm transfer** possible (context to the agent) or only blind transfer?	Better customer experience.	
23	How should the bot **end** the call — close the WebSocket, or call the hangup API (/v1/call/hangup)? Which call_id to use?	Clean call endings and correct billing.	
24	Are **DTMF** key presses sent to the bot during the stream?	Optional: “press 1 to confirm”.	
25	Are **mark** and **clear** events supported (to stop audio when the customer interrupts)?	Barge-in: the bot stops talking when the customer speaks.	
F. Recording and webhooks			
26	Are Voice Bot calls **recorded** by Smartflo (both sides)? Inbound and outbound?	Needed for quality checks and disputes.	
27	Is **recording_url** sent in the webhook after the call? How long is the link valid and how long are recordings kept?	We store the link with each call.	
28	Can we download recordings by API (call records API) and with which token?	Backup in our system.	
29	Which webhook events fire for Voice Bot calls (answered, hangup, missed)? Can we add a custom header with a secret?	Our webhook checks a secret key.	
G. Capacity, limits and cost			
30	How many **simultaneous calls (channels)** does our plan allow? Can it be increased?	Our dialer runs several calls at once.	
31	API rate limit (calls per second) for Click to Call and other APIs?	So the dialer never gets blocked.	
32	Per-minute charges for outbound and inbound calls, and for Voice Bot minutes (if different)?	Monthly budget in our console.	
33	API token validity and how to rotate it?	Avoid sudden failures.	

#	Question to Tata	Why we ask	Answer / notes
H. Compliance (TRAI / DLT)			
34	Is this DID allowed for **automated / AI outbound** calls to customers who gave consent (enquiries)?	Legal requirement.	
35	Do we need DLT registration, headers, templates or a 140/160-series number for these calls?	TRAI rules for commercial calls.	
36	Is the National DND list checked by Smartflo, or must we check it?	We keep our own Do-Not-Call list too.	
37	Any rule on calling hours (we use 09:00–21:00) or on announcing that it is an AI?	Our agent already says it is an AI assistant and the call may be recorded.	
I. Testing and go-live			
38	Can you give a **test setup** so we can try the bot on our own mobile before customers?	Safe first test.	
39	Is there a sandbox / log viewer to see stream connection errors on your side?	Faster troubleshooting.	
40	Support hours and escalation contact if calls fail after go-live?	Business continuity.	

Agreed next steps	**Go-live date / test date**

What we already have: Smartflo account, DID 080-6537-8787, IVR (1 Sales · 2 Sales Head · 3 CRM), 3 agents, call recording, API tokens and webhooks. What is missing: Channels Hub → Voice Bot. Our server follows the Smartflo “Bi-Directional Audio Streaming” and “Voice Streaming SOP” documents (wss endpoint, 8 kHz μ-law, mark/clear events, Click to Call Support API with Voice Bot destination).
